PROJECT DESIGN PHASE-2
PROPOSED SOLUTION TEMPLATE

Date	17 May 2023
Team ID	NM2023TMID22561
Project Name	Crime Vision: Advanced crime classification with deep learning

PROPOSED SOLUTION TEMPLATE:

Project team shall fill the following information in proposed solution template.

S.No.	Parameters	Description
1.	Advanced crime classification is a complex task.	Advanced crime classification is a difficult undertaking that frequently calls for physical labour and industry knowledge from law enforcement organisations. Traditional techniques of classifying crimes may be time-consuming, prone to mistakes, and incapable of handling massive amounts of data or intricate patterns.
2.	Advanced crime classification is a complex task	Deep learning algorithms can be used to create a sophisticated criminal classification system that overcomes the shortcomings of current approaches.
3.	Prediction of crime	Automatic and precise crime prediction
4.	Reduce crime rate	prediction of criminal activity before it occurs
5.	volume of data, computational resources, and the efficiency	The system should be able to handle and process huge datasets effectively as the amount of crime-related data grows.
